**Workshop on Innovations in Higher  
Education Mathematics Teaching**  
Cardiff University, 7–9 July 2014

# What is IBL?

## The Big Picture

**If we really want students to be independent, inquisitive, & persistent, then we need to provide them with the means to acquire these skills.**

## What is inquiry-based learning (IBL)?

- Hard to define! Manifests itself differently in different contexts.
- According to the **Academy of Inquiry-Based Learning**:
  - IBL is a teaching method that engages students in sense-making activities.
  - Students are given tasks requiring them to solve problems, conjecture, experiment, explore, create, communicate.
  - Rather than showing facts and/or algorithms, the instructor guides students via well-crafted problems.
- Often involves very little lecturing, and typically involves student presentations.
- Example: Modified Moore Method, after R.L. Moore.
- Students should as much as possible be responsible for:
  - guiding the acquisition of knowledge and,
  - validating the ideas presented. (Students should not be looking to the instructor as the sole authority.)

## Guiding Principle of IBL

Continually ask yourself the following question:

**Where do I draw the line between content I must impart to my students versus content they can produce independently?**

## Our Main Objective

How do we get here?

## Two Typical Approaches/Modes to IBL

1. Student presentations.
2. Small group work.

Most IBL instructors implement some combination.

## IBL vs Presentations/Group Work

- Student presentations & group work act as vehicles for IBL.
- Yet student presentations & group do not imply IBL.
- What matters is what is happening during these activities.

## IBL vs Inverted/Flipped Pedagogy

- IBL/Moore Method is an instructional practice.
- The flipped classroom is:
  - A platform, not an instructional practice.
  - Centered around the idea of removing some/all of the information transfer tasks outside of class replacing the time thats freed up with whatever instructor feels is appropriate.
